Sleeve sight

Closed Testing Guide

Join, test, report. Thank you for the feedback!

1 Opt in and install

Scan the code. Accept the invitation. Install the Sleevesight app.

Note: you need to be logged in to Google Play with the email the invitation was sent to.

Item not found? Check play.google.com/store/apps/details?id=app.sleevesight in a browser.

Opt in on Google Play

2 Turn on notification access

On the first screen, tap *Open notification access*, turn on Sleevesight, then come back and tap *Continue*. This enables Sleevesight to see what your player is playing; Sleevesight does not read your messages or any other notifications.

3 Scan your keys

Open Settings with the cogwheel at the top of the home screen. Go to *Secrets*, tap *Load keys*. Generate a QR code with your keys, or ask the developer for one. Tap *Next*, scan the QR code with the camera, and *Next* to save the keys. Then choose which services to enable, and *Next*.

Note: The keys are yours alone. We do not share them with anyone else, and you should not either.

4 Play a song, get an insight

Play music in your player. Open Sleevesight, tap *Write insight*. Set *Write insight* to auto if you want to see insights for each new track without tapping *Write insight*.

5 Problems, questions, suggestions? Tap the bug button

Tap the floating bug button at the bottom right. File a report; the app captures the context for you: the track, the insight, what the app did. Send the report from your email client.

WORTH TRYING

Skip a track in your player, and watch the insight follow.

Tap a citation chip to see its source.

Follow a second player: once it has played, switch it on in *Players*.

Tap the speaker to hear the insight read aloud.

Stay opted in and keep the app installed for 14 days.

Details: sleevesight.app/docs/tester/alpha, **support@sleevesight.app**.
