Sleeve sight

# Closed Testing Guide

Join, test, report. Thank you for the feedback!

## 1 Opt in and install

Scan the code. Accept the invitation. Install the Sleevesight app.

Note: you need to be logged in to Google Play with the email the invitation was sent to.

*Item not found*? Check play.google.com/store/apps/details?id=app.sleevesight in a browser.

Opt in on Google Play

## 2 Turn on notification access

On the first screen, tap *Open notification access*, turn on Sleevesight, then come back and tap *Continue*. This enables Sleevesight to see what your player is playing; Sleevesight does not read your messages or any other notifications.

## 3 Scan your keys

Open Settings with the cogwheel at the top of the home screen. Go to *Secrets*, tap *Load keys*, then *Start*. On a computer, type the five words it shows and your keys at sleevesight.app/api-keys. Tap *Next*, scan the code, and *Next*. Choose the keys, *Next*, the services, and *Complete* to save.

Note: The keys are yours alone. We do not share them with anyone else, and you should not either.

## 4 Play a song, get an insight

Play music in your player. Open Sleevesight, tap *Write insight*. From then on, each new track gets an insight; the arrow beside *Write insight* chooses when.

## 5 Problems, questions, suggestions? Tap the bug button

Tap the floating bug button at the bottom right, and choose *Report*. The app captures the context for you: the track, the insight, what the app did. Send the report with *Open in mail app*.

### WORTH TRYING

**Skip a track** in your player, and watch the insight follow.

**Tap a citation chip** to see its source.

**Follow a second player**: once it has played, switch it on in *Players*.

**Tap the speaker** to hear the insight read aloud.

## Stay opted in and keep the app installed for 14 days.

Details: sleevesight.app/docs/tester/alpha, **support@sleevesight.app**.
